

## **Techmar Garden Lighting**

Our Techmar Garden Lighting system is a brilliant new way to light up your garden. It is extremely easy to set up and is incredibly safe to use without the need of expert knowledge.

The whole system works on 12 Volts (low voltage) which is considered to be safe by European guide lines. Improved technology has now allowed 12 Volt lighting to provide sufficient light output to illuminate gardens and create ambient and atmospheric light effects.

The safety and simplicity of this Garden lighting system makes it possible for anyone to install these lighting themselves. The complete systems, from transformer to the fitting itself, is manufactured with watertight screw connectors so no tools will be necessary during installation. The assembly of the lamps may require a screwdriver.

Techmar Garden Lighting is suitable for installation in both existing and new-build or renovated gardens.

### **System explanation**

For you to light up your garden and get the best results we advise you to take the following steps:

Choose your lighting within the Garden Lights product range

The total amount of watts of the chosen lighting determines the size watts of the transformer (22, 60 or 150 watt)

If your system needs a 22 or 60 watt transformer it is recommended to start with a main cable 10 meter SPT-1W with 4 connectors, or with 6 meter SPT-1W extension cord or with a cable divider. These can be found in the accessories category under garden lighting.

<http://www.grovesnurseries.co.uk/categories/Accessories-6322.aspx>

You will also find a range of bulbs, dawn sensing timers to save electricity and cable dividers.

If your system requires a 150 watt transformer you are advised to start with a SPT-3W main cable, or with an extension cable 10 meter SPT-3 or a cable divider.

The location in the garden defines how many extension cables and cable connectors are needed.

Now you can start the installation. Cables do not have to be dug into the ground and can be extended or adapted at any time. The product range contains a number of different transformers, main cables, extension cables and cable connectors.

It really is simple. If you feel you want to chat about your needs please feel free to give Mike or Charlie a call on 01308 422654 or send us an e-mail at [garden@grovesnurseries.co.uk](mailto:garden@grovesnurseries.co.uk), we would be happy to explain the system further.
